Portfolio

PROFESSIONAL SUMMARY

Motivated and detail-oriented ICT Diploma graduate (NQF Level 6) with strong foundational knowledge in IT support, networking, system troubleshooting, and full-stack application development. Experienced in diagnosing hardware and software issues, configuring routers and Wi-Fi networks, and designing production-grade database schemas, RESTful/RPC APIs, and AI-assisted features. Passionate about building a career in IT support, service delivery, and enterprise technology environments.

TECHNICAL SKILLS

IT Support & Networking: Hardware/software troubleshooting, router configuration, Wi-Fi network setup, system diagnostics, user support, structured problem-solving
Languages: TypeScript, JavaScript, PHP, HTML, CSS, SQL (PL/pgSQL)
Frameworks & Libraries: React, Vite, React Router
Databases & Backend: PostgreSQL, Supabase (Auth, RLS, Realtime, Storage, Edge Functions, RPC), MySQL
APIs & Integrations: Stripe Payments (Elements & Payment Intents), AI/LLM APIs (content generation, support chat), image-processing APIs, REST APIs, webhooks
Architecture: Role-based access control, caching & concurrency limiting, DB triggers, reporting views
Tools & Platforms: Git, GitHub, Vercel, Netlify
Other: Full-stack development, database design, AI-assisted features, admin/analytics dashboards

PROJECTS

Notorious.Y2 - AI-Enhanced E-Commerce Platform - *TypeScript, React, Supabase/PostgreSQL, Stripe, AI/LLM APIs* 2026

- Architected a full-featured e-commerce platform (storefront, cart/wishlist, checkout, admin back office) on a 20+ table PostgreSQL schema with row-level security, triggers, and reporting views.
- Integrated Stripe (Payment Element & Payment Intents) for live payments and an atomic order-creation RPC that updates inventory, sales counters, invoices, and notifications in one transaction.
- Built AI-assisted admin tooling on serverless edge functions: an LLM product-description generator, AI-drafted cart-recovery emails, an automated support-chat assistant, and server-side image background removal.
- Designed a role-based admin dashboard (Owner/Admin/Manager/Support/Analyst/Viewer) spanning analytics, inventory, orders, marketing, and content, with realtime notifications via Supabase Realtime.
- Engineered a shared caching/concurrency-limiting layer to protect the DB connection pool and a configurable storefront product-floor layout engine.

Trackademy - Academic Performance & Course Management System - *TypeScript, Supabase, PostgreSQL* 2025

- Built a role-based academic system (student, lecturer, admin dashboards) on a 30+ table PostgreSQL/Supabase schema covering enrollments, attendance, and transcripts.
- Implemented a configurable exam-eligibility rule engine and GPA/pass-rate analytics with Excel/PDF export.

Buddy - Social Media & Student Management System - *PHP, JavaScript, MySQL, HTML, CSS* 2024

- Built a hybrid social-network and academic-management platform (feed, groups, pages, chat) with full student, course, and faculty administration for admin, lecturer, and student roles.
- Implemented attendance tracking and automated GPA/CGPA computation, backed by a MySQL database for user profiles, permissions, and content.

CampusCare - Campus Healthcare Management System - *PHP, CSS, MySQL* 2023

- Developed a role-based healthcare platform with distinct Admin, Healthcare Staff, and Student/Staff portals for appointments, treatments, and referrals.
- Implemented patient-record management and admin tooling for inventory, user/role administration, and data backup, backed by a MySQL database.

EDUCATION

Sol Plaatje University 2025
Diploma in Information and Communication Technology (ICT), NQF Level 6 - Specializing in Application Development

Umso High School 2020
National Senior Certificate

LANGUAGES

English | IsiXhosa
